NO SLAB OR MATRIX COSTS

Digital printing presses do not require a printing slab to transfer an image. They print the image from the file directly into the media substrate, so physical reproductions are not needed.

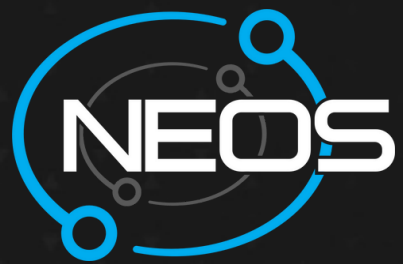

NO PROTOTYPE COSTS

Traditionally-produced prototypes are expensive and they come with restrictions, such as high-volume manufacturing. Instead, digital printers enable brand owners to review designs multiple times before printing and to produce small quantities of samples.

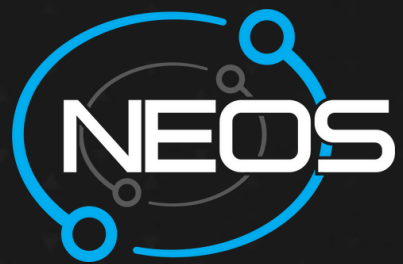

TIME OPTIMIZATION

NEOS digital printers are very cost-effective: they do not require start-up times nor lengthy setup.

LESS INK CONSUMPTION

NEOS industrial inkjet printers can estimate ink consumption before actual printing and optimize ink usage for savings.
